COOL-SHOT ULTRA

Additive to reactivation the efficiency of air conditioning and refrigeration systems

Product informations

Cool-Shot-Ultra is a synthetic catalyst that can reactivation the original condition of AC/R systems, reducing energy consumption and CO_2 emissions.

The single pack contains a syringe with additive, 1 flexible adapter, 1 1/4 "SAE adapter and 1 5/16" SAE adapter.

Product features

- consists of 2 catalysts and a lubricating agent that enable systems to eliminate the problem of oil fouling and restore performance to maximum efficiency
- does not alter the refrigerant gas contained in the system and increases the heat exchange of refrigeration lines with efficiencies over 76% and cooling capacity by 30-40%
- thanks to the use of this catalyst, it will be possible to reduce vibration and therefore friction inside the compressor, extending its life and reducing maintenance costs
- *compatible with all lubricants and refrigerant gases R12, R134a, R1234yf, CFCs, HFCs, HCFCs including R32 and HFO, and with the exception of ammonia only R717*
- *it is also the ideal solution for restoring the original efficiency of air conditioning systems in hybrid and electric vehicles!*

Technical Features

- 6 ml dose is for AC/R systems up to 21 KW - 6 kg refrigerant gas
- the maximum allowed dilution is 1:125 (1 part *COOL-SHOT ULTRA* for every 125 parts Compressor Oil)
