ELECTRONIC THERMOMETER

Electronic thermometer with double thread probe

Product informations

Electronic thermometer with double thread probe designed for measuring the temperature of liquid/vapour and the surface temperature of a solid object, with a considerably wider measuring range than those of the mercury thermometer and the alcoholmeter.

Product features

- double input for K temperature probes (**2 probes included**)
- maximum/average/minimum value memory
- sampling rate 4 times/s
- data maintenance
- LCD backlighting
- wide range and high accuracy
- low battery indication
- automatic shut-down
- *batteries included in the package*
