EXTERNAL P

Leak stop in bicomponent paste for plastic components

Product informations

External P is applied externally to seal all types of leaks that occur on the plastic components of refrigeration and air conditioning systems, without the dispersion of residues into the system.

Product features

- thanks to its elasticity, it is able to follow pipe expansion
- pressure resistance depends on the size of the leak
- also suitable for plumbing systems
- also resistant to washing liquids
- it does not disperse residues in the system

Technical Features

WORKING TEMPERATURE	-100°C ÷ + 270°C
THE RESISTANCE TO PRESSURE DEPENDS ON THE SIZE OF THE LEAK	• 5 MM = 40 BAR • 2 MM = 50 BAR • 1 MM = 57 BAR
