FIRST INTERVENTION CYLINDERS

First intervention cylinders for air conditioning systems

Product informations

Practical gas cylinders designed to intervene in the event of a technical failure caused by a malfunction of the air conditioner; it will be sufficient to connect the terminal of the flexible hose to the service connection of the condensing unit and let it work for a few minutes. Subsequently, with the help of the manometric unit on the cylinder, it will be possible to diagnose the situation of the system quickly and easily and to recharge it in a short time.

Kits available with any spare parts

- *R407C* (**SKU 11279**) - Spare Cylinder Code 11282
- *R410A* (**SKU 11280**)
- *TR422B* (**SKU 11696**) - Spare Cylinder Code 11697
