

## FOOT VALVE

Type Europa

### Product informations

Unidirectional valve designed to allow the flow of water to flow in one direction, equipped with obturator, return spring and integrated filter to stop the reflux of liquids inside the pipe or more generally in the system and at the same time filter the liquid in which it is immersed; the mechanism managed by the valve allows to prevent and avoid any contamination or dispersion of liquids which in some cases could prove harmful.

### Product features

- when the water pressure is absent (or insufficient) the valve remains closed
- used in hydraulic and aqueduct contexts
- it prevents the system from emptying in the event of a pump failure
- equipped with stainless steel filter with nylon fitting

### Technical Features
