## ANAEROBIC SEALANT

High resistance and/or permanent

### Product informations

**Anaerobic sealant for high strength metals** (SKU 50954), to block and seal threaded joints, with high resistance to thermal shocks, vibrations, water, gases, oils and fuels, refrigeration fluids and various chemical agents.

### Product features

- it can be used on all metals, both in free and forced couplings
- maintains sealing properties up to + 200°C

**Permanent anaerobic sealant** (SKU 50957) for metals with rapid polymerization and high mechanical resistance, to seal and block threaded joints and cylindrical couplings; with high resistance to thermal shocks, vibrations, chemical agents and aging.

**NB.** To seal PVC, PP or Nylon fittings, **use only P.T.F.E. based sealant** (SKU 50950 / 50951) by **pre-treating** the plastic threads with **the activator** (SKU 50959), **screw and tighten within 1 minute** (longer waiting times can break the sealant film that is already forming). **Do not use the thread sealer** on ABS and polycarbonate threads, for other types of materials ask in advance for our technical opinion.
