INSPECTABLE DRY SIPHON

"DOUBLE" model

Product informations

Vertical siphon for the condensate drain that prevents the formation of bad smells coming from the drainage pipe of air conditioning systems, thanks to the two horizontal/vertical inlets and outlets, its installation can be done both on the right and on the left regardless of the operation. Built in transparent material to allow a visual check of its operation and the regular production of condensation, the sealing o-rings prevent water leaks and the internal components are easily removable to allow periodic cleaning of the siphon.

The siphon only works vertically with the rubber fitting positioned at the top.

It can be supplied in the **siphon only** version *(**SKU 11833**)* or complete with **box and cover** *(**SKU 11832**)*; a **hole-opening tool** is also available to facilitate installation operations (***SKU 11832A***).

Technical Features

BOX SIZE	204X239X57 MM
SIPHON DIAMETER	20 MM
FLOW RATE	100 L/H
BOX MATERIAL	PST
SIPHON MATERIAL	PP
HYDRAULIC CLOSING COLUMN	70 MM
