

# MECHANICAL VALVE FOR AUTOMATIC INTERRUPTION OF GAS DISTRIBUTION

Antiseismic safety valve

## Product informations

Device designed to automatically shut off the gas flow in the event of an earthquake under the conditions defined in the ASCE 25-16 technical standard and by the PED and ATEX directives.

## Product features

- completely mechanical device that does not require any electrical power supply
- when the device is subject to seismic vibrations as defined in the technical standard, the valve intervenes automatically and interrupts the gas flow
- after the automatic closing intervention, the valve can be reset manually, it remains closed until it is reset allowing the gas flow again
- the installation of the valve can be horizontal or vertical, depending on the model

VALVE STRUCTURE	
1	VALVE BODY
2	SENSOR CASING
3	SENSOR COVER
4	STAINLESS STEEL BALL
