# METHANE AND LPG GAS DETECTOR

Model CD34 and CD44, complete with direct power supply to the solenoid valve

### **Product informations**

**CD34** and **CD44**, the gas detectors that uses catalytic sensors, have excellent gas sensitivity and at the same time guarantee high selectivity to interferents normally present in domestic environments and often the cause of false alarms (cooking fumes, wines, alcohol, detergents, ammonia, etc.. ); their high performance and the compliance of the *LINEASICURA* line with the standard, guarantees the reliability of these products. The lineasicura models are equipped with fault, system fault and alarm fault light signals and a built-in buzzer.

### **Product features**

- *Linearity*: the signal produced by the sensor is proportional to the concentration of gas present in the environment
- Selectivity: the sensor reacts only in the presence of combustible gases
- *Stability:* the presence of an internal thermal compensator allows a stable response of the sensor at the same gas concentration with variations in temperature and humidity
- Designed to leading directly the solenoid valve
