PRESSURE REDUCER FOR WATER

Mod. "Mignon" with piston operation

Product informations

Automatic valve that reduces and stabilizes the pressure of a fluid inside a distribution pipe according to the pre-set value; the small size, the silent operation and the particular "self-cleaning" internal seat make it particularly suitable for small users such as apartments.

Product features

- the surface nickel-plating treatment exerts a protective action against corrosive degradation and limescale
- it can be used directly on the main distribution line
- the structure of the internal piston guarantees rigidity, resistance and high regulation precision, thanks to its compensated seat
- its sealing gaskets guarantee resistance to wear and limited maintenance interventions
- the internal finish of the body and the increased dimensions of the passages allow to obtain high flow rates even with small water withdrawals
- suitable for transporting food fluids and drinking water (meets the specific requirements of the Ministry of Health)
