REAGENT FOR CALCIUM-TEST ANALYSIS

Single component water hardness kit

Product informations

Kit used to analyze the concentration of calcium and magnesium in water.

Product features

- fast and simple to use
- type of analysis: volumetric
- type of method: titration of alkaline earth metals (especially calcium and magnesium) with EDTA (Ethylenediaminetetraacetic acid)

Technical Features

INSTRUCTIONS

1. Fill the test tube with water up to the 5 ml mark
2. In the presence of water hardness higher than 3 ppm $CaCO_3$ the water turns red

- In the presence of traces of water hardness for about 1 ppm, the water turns purple
- In the presence of traces of water hardness for about 2 ppm, the water turns grey
- In the presence of traces of water hardness between 2 and 3 ppm $CaCO_3$ the water turns light pink
- *In the absence of water hardness, water turns dark blue*
