RECTILINEAR THREADED TRANSITION FITTING FOR WATER

Threaded version

Product informations

Transition fitting designed to allow the transition from a plastic (polyethylene) system to a metal one, to allow water distribution systems to exit the ground. The joints of polyethylene pipes to metal pipes are made by means of a threaded connection for the conveyance of water, drainage and sewage under pressure. The galvanized part must be protected from corrosion before burial, by applying cold tar bandages or specific insulating tapes.

Joints with different diameters are supplied on request.
