

SEISMIC SENSOR FOR SOLENOID VALVES

Anti-seismic electronic device

Product informations

M90, the device which, combined with a safety solenoid valve, closes the gas passage in the event of

- seismic event (with analysis over time and frequency of accelerations)
- remote control (e.g. gas detector, emergency closure)

The solenoid valve also includes also a relay alarm exit to be used for remote signals and to stop the power supplies; the sensor can be monted with normally closed/ open, manual reset solenoid valves or normally closed with automatic reset solenoid valves produced by *MADAS*. It is possible to apply the kit seismic sensor even on solenoid valves already installed. The seismic sensor has been tested according to: ASCE 25-06 (USA) - TS12884 (Turkey).
