

THERMOSTATIC MIXING VALVE FOR SOLAR SYSTEMS

Equipped with male attack

Product informations

Thermostatic mixing valve designed to be installed in solar systems for the production of domestic hot water if it is necessary to adjust the temperature of the hot water to the users for comfort and safety reasons; this automatically mixes the hot water coming from the solar storage with the cold water coming from the water mains at the desired temperature. The valve is equipped with an anti-scald safety function which automatically blocks the supply of potentially scalding hot water in the event of a sudden lack of pressure in the cold water connection; even in the event of a sudden lack of hot water, the device will interrupt the passage of cold water and therefore the outlet flow, avoiding unpleasant thermal shocks.

Technical Features

<i>MAXIMUM PERMISSIBLE PRESSURE</i>	10 BAR
<i>MAXIMUM WORKING PRESSURE</i>	5 BAR
<i>MINIMUM CAPACITY (FOR CORRECT OPERATION)</i>	9 L/MIN
<i>MAX INLET TEMPERATURE</i>	100°C
<i>TEMPERATURE REGULATION RANGE</i>	30°C ÷ 65°C
<i>PRECISION</i>	± 2°C
<i>FLOW COEFFICIENT</i>	1,3 ÷ 1,4
<i>COMPATIBLE FLUIDS</i>	WATER
