TOTAL CARE

Complete purifying treatment for air conditioning systems, cockpits and Interiors

Product informations

The ***Total Care*** purifying treatment consists of two canisters:

- *Canister of purifying foamy treatment*, designed to sanitize and clean the air conditioning system and vehicle interiors, removing microorganisms that are harmful to health and leaving a pleasant feeling of cleanliness; thanks to its foam formulation it adheres perfectly to the evaporator fins and to the surfaces of the ventilation ducts, removing dirt. Equipped with a long cannula, it allows you to reach deep into the air conditioning system ensuring the best distribution of the product.
- *Aerosol canister*, purifies the air and all the surfaces of the passenger compartment or the surrounding environment by removing any contaminating particles that may be dispersed, releasing a pleasant scent; thanks to its continuous flow it saturates the product environment reaching even the most difficult to reach surfaces, without wetting or leaving residues.

Product features

- sanitizes A/C systems, cars and cockpits
- sanitizes indoor units and environments
- ready to use
- it does not wet and leaves no residue

Supplied in 100 ml canister, specific dose for air conditioners up to 12.000 Btu/h and rooms up to 15 m^2
